Course Description:

This course is designed to provide an introduction to types of geographic data, and methods and interpretation of data presentation. It is very common in geography and other fields to present data graphically to best communicate trends, anomalies, variability, etc. Appreciation and understanding of these types of presentation requires training, which is often overlooked. As you progress through the Geography curriculum you will encounter and interpret graphical presentations of data. The main purpose of this course is to introduce you to graphical data and provide you the background and knowledge to understand and create these types of presentations.
